

# Camptocamp and OpenGeo Formalize Partnership

## Open Source Leaders Join Forces to Support European Users of the OpenGeo Suite

**New York, USA, Lausanne, Switerland, August 24, 2011** — [Camptocamp](#), a leading European open source solutions provider and [OpenGeo](#), a global open source geospatial software company today announced a new partnership. Camptocamp will add the OpenGeo Suite Enterprise Edition to its product offerings, and will provide support for the OpenGeo Suite in Western Europe's trans-alpine region.

OpenGeo and Camptocamp have collaborated for several years in the development of core geospatial technologies. Both companies are active leaders in the OpenLayers project and jointly initiated the GeoExt project. In early 2011 the two companies organized an end-users code sprint to enhance mobile support in the OpenLayers project. When discussing the announcement, Claude Philipona, Camptocamp President said, "We have been working closely with OpenGeo for the last few years. This is a natural progression for us to form an official partnership based on our shared values. Together, our clients and our companies will benefit from our joint efforts."

Chris Holmes, OpenGeo president, added: "This partnership provides many benefits. Our combined resources during code sprints and projects have been very productive; this formalized agreement will ensure a collaborative approach to our future commitments to the open source community. Our Western European clients also gain local language support and expertise from Camptocamp."

### About OpenGeo

[OpenGeo](#) is a social enterprise working to build the best web-based geospatial technology. The company brings the best practices of open source software to geospatial organizations around the world by providing enterprises with supported, tested, and integrated open source solutions to build the Geospatial Web. OpenGeo also supports open source communities by employing key developers of [PostGIS](#), [GeoServer](#), and [OpenLayers](#). Since 2002, the company has provided successful consulting services and products to clients like the World Bank, Google, the UK Ordnance Survey, Portland TriMet, MassGIS, Landgate, and the Federal Communications Commission. OpenGeo is the geospatial division of [OpenPlans](#), a New York-based 501(c)(3) non-profit that informs and engages communities through journalism and open source software. All of OpenGeo's revenue has been and will continue to be re-invested into innovative and useful software in support of the OpenPlans mission.

### About Camptocamp

Camptocamp is a service-oriented editor and integrator of Open Source software applications active in three divisions: Geospatial Solutions (Geospatial data infrastructure), Business Solutions (Enterprise Resource Planning), and Infrastructure Solutions (Linux server management and automation, cloud computing infrastructure). Camptocamp, with headquarters in Lausanne, Switzerland, and branches in Chambéry, France and Vienna, Austria have been offering a complete set of services (consulting, R&D, training, and support) since 2001. Following the principles of sustainable development, Camptocamp commits to share all of its generic developments to the Open Source communities related to its business divisions.
